

## K-DUCK ZODIAC HARNESS

The K-DUCK Harness is used to carry the Zodiac inflatable boat strapped to the underside of the MH-60 "Night Hawk" Helicopters. The upper section of the harness is designed to interface with the aircraft installed FRIES system and after obtaining a hover height of 1-2 feet above the water, a single cut of the overhead strap will release the Zodiac.

Each K-Duck Zodiac Harness is comprised of the following:

- Web cradle for Zodiac boat
- 2 crowsfoot sections
- Cut-strap and nose strap
- Zip-up canvas kit bag for transport and storage

**Materials:** Constructed from 4-inch high tensile strength "Tube-Edge" nylon. "Tube-Edge" is non-absorbent, fray resistant, and four times more cut-resistant to repeated lateral impact from sharp edges than conventional products.

**Service Life:** If properly maintained and visually inspected before use, K-Duck Harnesses should last in excess of 10 years. Damaged harnesses can be sent to Natick for inspection and all necessary repairs (turn-around time: approx. 2 weeks)

**Weight Limit:** Good for maximum loaded weight of 1,500-lbs. (Zodiac may be damaged if loaded to higher weights.)

**Total Weight:** Under 100-lbs. Only 3 percent increase in weight when wet.

**Maintenance:** Must be maintained in accordance with TM 10-1670-201-23 / NAVAIR 13-1-17.

**Price Per Unit:** \$7,000 (includes shipping).

**Lead Time:** Will be delivered within 2 weeks on orders of up to 3 units, upon receipt of funds by Natick. Larger orders will require longer lead times.
